

TinyTERM Subscription Host Access

Replacement Terminal Emulation Software

Subscription Licensing – Turning the Latest Trend into a Solid Future

The move by software vendors away from the traditional permanent license to a low yearly subscription fee that includes all licensing, upgrades, maintenance and technical support has the potential to reduce software costs greatly. The terminal emulator vendors have not yet adopted this model, though communications protocols and security requirements have become standardized.

Reducing Costs for IBM 3270 Access

Century Software has provided the highest quality terminal emulators for over 25 years, and is now providing an opportunity for organizations to save 30%-80% of their ongoing costs yearly, while retaining all required functionality and support. This is made possible by replacing and consolidating corporate terminal emulation, and using the latest trend in software pricing: yearly subscription licensing that includes everything.

Replacing Without Repurchasing

Century has created a new, lower cost way of providing IBM host access solutions, the Annual Subscription License. Using a low yearly fee, the subscription includes licenses for replacement and consolidation of all a company's terminal emulators, regardless of origin and capital spent, along with upgrades, maintenance, technical support, and feature enhancements – available now with TinyTERM Subscription Host Access.

Replace Attachmate Extra! for \$30/year

TinyTERM Subscription Host Access easily replaces products such as Attachmate Extra!, Micro Focus Rumba®, and IBM Personal Communications®. Companies replacing and consolidating all their current emulators using the Annual Subscription License can expect savings of at least 30%-80% each year on recurring expense from what is currently being paid. Prices for complete terminal emulation product, maintenance and support are a maximum of \$30/year per user, with lower prices on larger volumes.

IBM 3270 and 5250 Access

TinyTERM Subscription Host Access provides IBM mainframe connectivity with precise TN3270E emulation, including secure host access utilizing strong SSL/TLS encryption. IBM AS/400 hosts are supported, with exact TN5250E emulation, LPD printer support, and SSL/TLS. Organizations using UNIX and Linux servers can rely on legacy terminal emulations including DEC VT420, VT100, AT386, and Wyse 60. SSH encryption is used to secure all host communications.

Enterprise Deployment

Advanced deployment capabilities provide flexibility to control and manage the enterprise rollout process. Customized host access configurations can be easily and automatically pushed from corporate file servers to multiple desktops, and are compatible with Microsoft MSI and SMS installation mechanisms. TinyTERM Subscription Host Access can be installed directly on Citrix and Microsoft thin client terminal servers for deployment without any desktop installation.

Trouble-Free Transition and Migration

Migrating from an existing emulator to TinyTERM Subscription Host Access is greatly simplified with built-in keyboard and code page mappings compatible with Attachmate, Micro Focus and IBM products. Changes in day-to-day business methods are minimized by allowing TinyTERM to run side-by-side with the current terminal emulator, providing a smooth transition. Importing prebuilt configuration settings is easy using the File Import menu, which converts other vendors' configuration files. TinyTERM can be configured with identical display colors, keyboard mappings and a customizable user interface that initially matches Attachmate Extra!.

Benefits of Subscription Licensing

Companies can save 30%-80% each year on ongoing maintenance expenses, with the flexibility to increase or decrease user counts at any time. Replacement of the existing terminal emulator with new product usage licenses is completely covered, as is all support, version upgrades and feature enhancements. Capital expenditures are eliminated and replaced with a deductible low-cost subscription expense.

Subscription licensing is ideal for companies currently paying ongoing maintenance or those requiring a fully-supported IBM terminal emulation solution, future-proofed against Windows and security upgrades. As government and corporate security standards continue to strengthen, and operating systems continue to upgrade, the need for ongoing maintenance is ever-present.

Pricing

With Annual Subscription Licensing, the maximum cost for TinyTERM Subscription Host Access is USD \$30 per user per year, or just \$2.50 per user per month with a 100-user minimum. Pricing is volume-based, so for larger quantities the cost can be much lower.

Century Software has created the annual licensing option to help organizations control and reduce their terminal emulation costs. The subscription license includes product use licensing, technical support, version upgrades and feature enhancements. It is ideal for organizations requiring a fully supported terminal emulation product, with full coverage for operating system and security requirement upgrades.

If your organization uses Attachmate Extra!, Micro Focus Rumba®, IBM Personal Communications® or other terminal emulation products in any combination, now is the time to consolidate and standardize on a single, lower-cost solution: TinyTERM Subscription Host Access.

Terminal Emulations

IBM TN3270E, TN3270 Models 2-5 (RFC 2355, 1646)
 IBM TN5250E, TN5250 (RFC 1205)
 DEC VT420, VT100, AT386, WYSE 60
 Multiple session support
 Resizable emulator screen w/scalable TrueType fonts
 Scrollback buffer
 Transmit, receive and keyboard code pages

Printing

LPD Print Server
 DEC VT and WYSE Transparent Printing, Screen Printing
 Print redirection to LPD and Windows spoolers

Graphical File Transfer

IND\$FILE protocol for IBM Mainframes
 Standalone graphical FTP client supports SFTP, SCP and SSH secure file transfer

Security

Advanced SSL and TSL security for IBM host sessions
 Advanced SSH strong encryption security for UNIX access w/1024-bit keys
 Port forwarding

Corporate Deployment

Automated installation using Microsoft MSI, SMS and central installation servers
 Publish using Citrix Presentation Server and Microsoft Terminal Server
 Supports Citrix Password Manager

Customization

Macro record, edit and playback keyboard
 Automatic keyboard macro generation
 HLLAPI/COM/OLE/ActiveX API support
 JavaScript Compiled Script Language
 Graphical keyboard remapping
 Mouse button remapping and macros
 Configurable tool bars, text attributes, cursors and background images

International

Host multi-byte character decoding
 Unicode UTF-8, Japanese, Chinese, Korean
 DBCS decoding

Migration Features

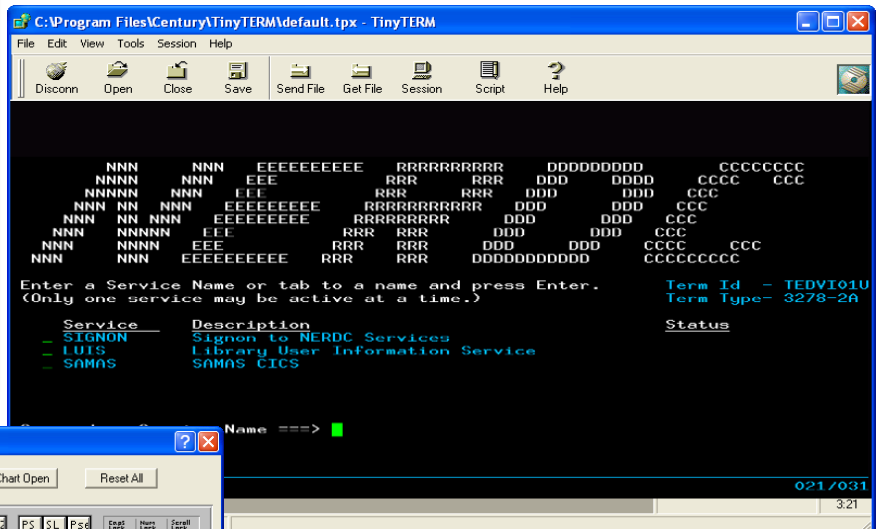

Keyboard, codepage, and attribute compatibility with Attachmate Extra!
 Configuration file import utilities

System Requirements

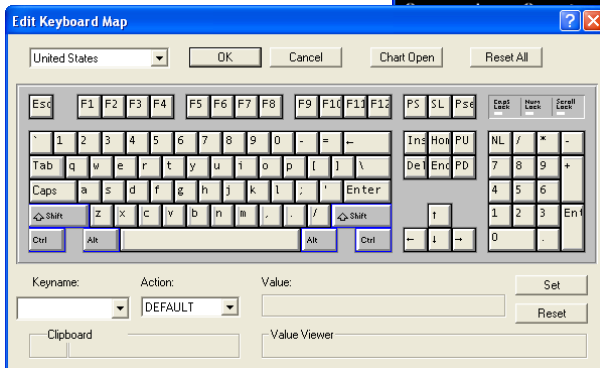

Windows 7, Vista, XP and 2000 compatible
 Windows Terminal Server
 2000/2003/2008
 Citrix MetaFrame, Presentation Server, XenApp
 32MB Memory, 16MB Disk

Product Highlights

- TN3270 and TN5250 IBM Host Access
- VT420, VT100, AT386, Wyse 60
- Fully Windows 7 Compatible
- SSL, TLS and SSH strong encryption support
- Deploy using MSI, SMS, Citrix and Microsoft Terminal Server
- Standalone graphical file transfer client with SFTP, FTP
- Low yearly subscription covers all replacement and new licenses, support and upgrades
